

OXFORD LAYERS

Cool Dry
FAST WICKING

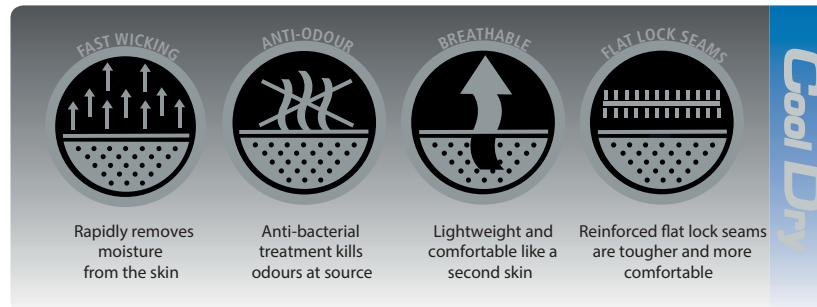

Cool Dry **WICKING**

Oxford Cool Dry Layers offer a lightweight base layer, which can be used all year round.

Perfect for warm conditions, when you want to wick the moisture away from the skin as effectively as possible and have it evaporate quickly to provide a cooling effect.

Perfect for cool conditions, when you still want to wick the moisture away from the skin, but benefit from the thermal effect of the (quick drying) material.

For much cooler conditions, you might want to try lightweight Oxford **Warm Dry** Layers for their exceptional thermal properties.
